Hampson extends relationship with Borg Warner

Hampson Industries PLC ('Hampson'), the international aerospace and precision engineering group, announces it has entered into an agreement with Borg Warner Turbo and Emissions Systems ("Borg Warner") to supply shaft and wheel assemblies for high performance turbochargers for various passenger car applications.

The agreement not only extends and secures an existing important trading relationship, but contemplates a 20% increase in the volume of shaft and wheel product supplied to Borg Warner over the next two years.

Commenting on the agreement, Hampson Group Chief Executive, Kim Ward, said:

"This long term agreement with Borg Warner enables us to partner a key customer more closely and efficiently as global demand for turbochargers continues to rise in passenger car and light vehicle markets. As legal restrictions become more stringent and environmental taxes on vehicle emissions continue to rise in most major economies, we continue to expect growth in this market and remain very confident of securing further new business as a result. This arrangement represents a significant strategic development in our Automotive Turbocharger division."

About Hampson:

Hampson Industries PLC is listed on the main market of the London Stock Exchange (Symbol: HAMP). The Group's operations are structured into three business segments, serving primarily the global commercial and military aerospace and specialist engineering markets, from manufacturing facilities in the UK, North America and India

Each of Hampson's businesses are bound by the common thread of supplying highly-engineered products for demanding end-use applications. Whether as high complexity components using niche manufacturing processes, or as part of innovatively engineered, fully-integrated assemblies, Hampson's products are typically found across the world, in arduous operating environments, wherever the highest levels of performance are demanded; on land, sea, in the air or in space.

Approximately 85% of the Group's sales are derived from its aerospace activities, the balance from the specialist market for automotive turbocharger components.

The Hampson group employs over 1,900 people worldwide. For more information on Hampson: www.hampsongroup.com
